CF EVANS TENURE

2022- Present

As Construction Technology Manager, Pat leads the integration of technology into CF Evans' field operations, helping teams build with greater precision, efficiency, and quality control. Pat joined CF Evans in 2022 as a Front End Superintendent, where he managed early-phase field operations including sitework, layout, and structural coordination. Drawing on his background in GPS and precision measurement, he launched the CF Evans Surveying and QC Initiative, an in-house program that brings advanced surveying capabilities and quality control verification directly to project sites. In his current role, Pat works across project teams to implement tools and processes that improve accuracy from the ground up, reduce rework, and support superintendents in the field. His combination of hands-on field experience and technical expertise allows him to bridge the gap between construction operations and emerging technology, strengthening how CF Evans delivers on every project.

Project Examples:

- Woven — Greenville, SC | 214 Units
- 2222 Main View — Columbia, SC | 320 Units
- Northpoint on Jarvis Creek — Hilton Head, SC | 157 Units
- Album Dorchester — Charleston, SC | 150 Units
- Brooking Square (Point Hope 3) — Charleston, SC | 348 Units
- Evado Nova Pax — Summerville, SC | 309 Units
