CF EVANS CONSTRUCTION

Better Information. Better Decisions.

As Construction Technology Manager, Pat leads the integration of technology into CF Evans' field operations, helping teams build with greater precision, efficiency, and quality control. Drawing on a background in GPS and precision measurement, he launched the CF Evans Surveying and QC Initiative, an in-house program that brings advanced surveying and quality-control verification directly to project sites. He works across project teams to implement tools and processes that improve accuracy from the ground up, reduce rework, and support superintendents in the field.

On Your Project, Pat:

- Brings advanced in-house surveying and layout directly to the jobsite
- Implements technology that improves accuracy from the ground up
- Provides quality-control verification that reduces rework
- Supports superintendents with precision tools and field data

Project Examples:

• Woven — Greenville, SC | 214 Units
• 2222 Main View — Columbia, SC | 320 Units
• Northpoint on Jarvis Creek — Hilton Head, SC | 157 Units
• Album Dorchester — Charleston, SC | 150 Units
• Brooking Square (Point Hope 3) — Charleston, SC | 348 Units

My Promise: *"We will use technology to make your project more transparent and our team more effective, not simply because the technology exists."*
